

# IncrediBuild

BEYOND ACCELERATION

**A simple and speedy way to accelerate builds, compilations, and development processes 30x faster or more.**

---

With IncrediBuild's unique parallel processing solutions, you can easily achieve dramatically faster builds. IncrediBuild turns your network into a virtual supercomputer, harnessing idle CPU cycles from remote machines even while they are in use. There is no change to source code, and absolutely no additional hardware required.

*"Our build time with IncrediBuild was reduced from 12 hours to 1.5 hours, the support is excellent, and IncrediBuild requires little to zero maintenance."*

**Daniel Pressler - Configuration and Release Manager, BMC® Software**

It's no wonder why IncrediBuild is trusted by over 100,000 users in more than 2000 organizations for build and application acceleration.

---

## **Easy to install, use and maintain.**

We believe that software acceleration should make life easier on development teams, not harder. IncrediBuild is a plug-and-play solution that runs out-of-the-box on your existing hardware. IncrediBuild takes care of acceleration so development teams can focus on what they do best: developing great software.

## **Advanced features for optimal speed and performance**

IncrediBuild is a robust, fully-featured parallel computing solution with a host of advanced features. Including file caching and real-time compression cut down on network traffic, adaptive resource assignment to dynamically reassign processes according to changing CPU availability, and task doubling to "race" available agents against one another to avoid bottlenecks.

## Achieve HPC-level processing at a fraction of the cost

Incredibuild is tapping into the unused power of the network, eliminates the need for expensive dedicated hardware. IncrediBuild can run on any Windows®-based machine including single-core machines, multi-CPU machines, and multi-core build servers, and even scale out to the public cloud.

**DISCOVER THE ACCELERATION DIFFERENCE!  
TRY INCREDIBUILD'S DEVELOPMENT  
ACCELERATION SOLUTIONS:**

## Reduce Visual Studio® Code Build Time By Up to 90 %

IncrediBuild for Visual Studio is fully integrated with MS Visual Studio® (Compatible with version 6 and above on all Windows® platforms since Win NT). IncrediBuild speeds up builds by distributing C/C++/C# compilations and other tasks on machines across the local network.

## Accelerate Make-Based Code and Data Builds Achieving Up to 30x Faster Processing.

Accelerate executions of Build/Make tools such as Make, MSBuild, Gmake, VSimake, Jam, nAnt, Jom, Python, VsiMake, BJam, Jam+, SCons, ANT, gnu make, and more. IncrediBuild accelerates widely used compilers such as Intel C++, Intel® Fortran compiler, Nvidia's® CUDA compiler, and others without requiring any changes to the source code or make files.

We will be glad to hear from you....

## Shorten Your Development Lifecycle By Minutes, Hours, and Even Days...

IncrediBuild for DevTools accelerates processes and key tools used in Application Lifecycle Management. IncrediBuild shortens development cycles for teams achieving enhanced development productivity, and helps meet tight deadlines.

From Unit testing, QA or code analysis to rendering, simulations, packaging conversion, compression and more IncrediBuild for Dev Tool will help you reduce the time you spend on running these solutions.

## Dramatically Accelerate Game Development for Consoles and Game Engines

IncrediBuild has a dedicated solution fully integrated with game console development environments. Slashing overall development time by accelerating all aspects of game creation for Xbox®, PlayStation® (all versions), Nintendo Wii U™, Nintendo 3DS™, and popular graphic and game engines. IncrediBuild dramatically accelerates time to market for new titles. It is fully integrated with Visual studio® and Make environments, including integrated build monitor visualization.
